#### About the Survey

\*The survey was conducted online by Edelman Intelligence on behalf of DePuy Synthes Companies between June 4 - 15, 2018 in the United States among 253 women 45-65 years old who had knee and/or hip replacement surgery in the last five years and 271 women 45-65 years old who are planning to have knee and/or hip replacement surgery in the next two years.

#### Important Safety Information:

It's important to remember that the way your hip or knee replacement performs depends on your age, weight, activity level and other factors. There are potential risks with any surgery and recovery will take time. If you have a condition that would limit you from rehabilitation you shouldn't have these surgeries. Only your orthopaedic surgeon can decide if hip or knee replacement is right for you, based on your condition.
